

## Remanufactured Lift Truck Parts

Remanufactured Forklift Parts - Forklifts are somewhat expensive pieces of machinery in view of the fact that a new electric lift truck model could cost starting from \$18,000 to \$25,000, for a five thousand pound equipment. Also, a few thousands of dollars will have to be invested in a battery battery and charger. The same internal combustion lift truck of similar lift capacity would cost a little less and the diesel units that are capable of heavier lifting capacities could cost upwards of \$100,000. Reconditioned forklifts are an alternative to be able to save a large amount of money as they cost less than half the price of brand new models.

A few purchasers may be leery about acquiring a used or reconditioned lift truck because they feel they would have to spend more on maintenance. Nonetheless, a properly reconditioned forklift would be able to work just as well as a new one. Even if your lift would get heavy use, as long as you take good care of the machine, it would serve your requirements and possibly save you lots of cash.

When considering buying a used forklift, it is important to ascertain what the seller means by the term reconditioned or refurbished. Numerous companies do an excellent job of absolutely making over the unit before reselling it. This consists of disassembling the lift truck, rebuilding the engine, sandblasting the lift and after that reassembling everything and finishing with a fresh coat of paint.

To meticulously reconstruct a forklift engine, a good business will firstly absolutely disassemble it. A heat cleaning system is then used to clean all of the components. When this step has been finished, all of the parts are checked to see if they have any defects, any breakage or any extensive wear. Some components such as crankshafts, cylinder blocks, connecting rods and cylinder heads are reground, resurfaced and resized if necessary. Various parts such as gears, nuts, bolts et cetera. are replaced or repaired as considered necessary.

The engine is rebuilt manually when the overhaul has been finished. After putting it back together, a series of tests are applied to the running machine. This is done to be able to check all of the components to guarantee there are no problems or leaks. If any problems occur, the needed modifications are made.

There must be no reason to be worried about acquiring a reconditioned or refurbished forklift from quality sellers. The process of rebuilding the machines ensures the utmost in dependability. Repairs costs could really work out to be less in view of the fact that you will avoid the initial phase of higher maintenance projections which a new lift truck has as it is broken in. By following routine repairs schedules and taking care of the machinery correctly, a reconditioned forklift would serve you well.
